

How to Choose the Correct Material

Nylon Flags

- Indoor & Long-term outdoor use
- Light to Moderate wind
- Shiny material

Polyester

- Indoor & Long-term outdoor use
- Heavy wind
- Matte material

Cotton

- Indoor & Short-term outdoor use
- Dry weather, will bleed if wet
- Matte material

Printed

- Indoor & Short-term outdoor use
- Light wind
- Matt Material

What is the difference between canvas header with grommets, a roped heading, pole sleeve or pole sleeve with fringe?

A canvas header and grommets hoist end is standard on all of our American flags up to a 6' x 10' size. The canvas header provides durability, while the brass grommets allow your flag to be fastened to your flagpole using snap hooks or plastic ties. A header and grommet flag is used for in-ground flagpoles as well as some home flag display sets.

A roped heading is standard for flags measuring 8' x 12' or larger. It features a nylon rope running through the length of the canvas header with reinforced galvanized metal thimbles at the top and bottom.

A pole sleeve is traditionally used for outdoor flag display sets and will easily slide over a 1" diameter pole commonly mounted outside at a 45 degree angle on homes and buildings. It is also used on Indoor Flag sets for those that prefer a flag without fringe.

Flags featuring gold fringe are traditionally used for parades and indoor displays like classrooms, lobbies, courtrooms and more. Features a fully lined pole sleeve and gold fringe around the top, fly end, and bottom edges giving it an upscale, classic appearance. Easily match your American indoor flag set with our indoor state, military, religious and international flags featuring gold fringe.

HOW TO CHOOSE THE CORRECT SIZE FLAG *For Your Flagpole*
